Subject: radio interviews

I saw your name in the paper as someone on the BOLIM. A couple of people contacted me last fall, expressing concerns about radio interviews Dr. Nass did on the Voice of Maine radio show. I suggested they report this to the BOLIM, but both told me they didn't want to. I don't want to report it either, for several reasons, including that I didn't listen to the full interviews. One of them sent me the links to recordings of two interviews below and notes. I just checked the links, and they appear to still work. I thought I'd just share this information with you. Hopefully the BOLIM is already aware of this. Dora

10/22/21 Interview:

<https://www.wvomfm.com/episode/ghrt-rewind-10-22-dr-meryl-nass-1600/>

- All three C-19 vaccines use new techniques. They are gene therapy products.
- Myocarditis is quite common from the vaccines, and many times permanent scarring of the heart occurs.
- You're more likely to be infected from COVID in the UK if you're vaccinated, then if you're unvaccinated.
- CDC's data are not credible.
- The vaccines were rushed, in part because there was a lot of money at stake.
- CDC and some state governments are suppressing evidence of some effective drugs, e.g. Ivermectin and Hydroxychloroquine.
- I'm an expert on these topics - I've testified before 6 congressional hearings, I'm listed in Who's Who.

- Hydroxychloroquine, Ivermectin, and doxycycline - are effective, work better than the vaccine, and if we'd used them since the beginning of the pandemic, the pandemic would be over with. Maine State Government (Board of Pharmacy, others) are suppressing their use.
- These medications are being suppressed because otherwise, the vaccines would not have been authorized since the FDA authorization is based on no other available therapeutics.

10/27/21 Interview:

- Natural immunity is superior to vaccine immunity.
C-19 vaccines are not technically vaccines, they're gene therapy
- The C-19 vaccines only produce antibodies to one protein on the virus; you don't have immunity to the whole virus.
- Public health professionals told us that the immunity from the virus was weaker from the vaccine, yet that was made up. It was a story that was floated in order to push the vaccine.
- Studies show the immunity from natural infection is much stronger than that from the vaccine, except those studies from the US CDC who make up studies to show what they want to show.
- I don't know if I've had C-19. I may have. But if not, and if I get infected, I've got Ivermectin, hydroxychloroquine, doxycycline, and supplements. If I get infected, I won't be hospitalized, I won't get a very severe case. And when I recover, I'll have lifelong immunity.
- Vaccines are a huge money maker, the companies have no liability
- The government is giving everyone false information
